### DESCRIPTION OF SYMBOLS

**MD** Medical Device

#### FIGURE 1

- A. Ankle cuff
- B. Ankle Cuff Buckle
- C. Ankle Clamp
- D. Nut and Bolt
- E. Shoe Inlay
- F. Connection Strap
- G. Connection Strap Keyhole
- H. Optional Foot Wrap

#### INDICATIONS FOR USE

Drop foot

- PRECAUTIONS**
- This is intended for use by patients with spasticity.
  - Never wear the brace over an open wound.
  - Users with sensitive skin or those at risk of skin ulcerations and infections, such as in the case of diabetes or peripheral vascular disease, are advised to consult with their practitioner before use of this product.
  - Do not over-tighten braces as risk loss of blood flow.
  - If the user experiences pain, swelling, sensations of heat or cold, or shows signs of insufficient blood flow (turning blue, white, or cold) while using the brace, advised to discontinue use immediately and consult practitioner.

#### WASHING & CARE

Drop foot

#### LIST OF MATERIALS

Nylon, polyethylene, polypropylene, cotton, polyurethane, polyester, silicone (printing).

#### INITIAL APPLICATION AND ADJUSTMENT

**Do not use**

- Measure ankle circumference with ankle cuff (Figure 2).
- Cut an ankle cuff to size (Figure 3).
- Secure the ankle cuff (Figure 4).

**Nut and Bolt (Figure 5)**

- Ensure a secure and tight fit between nut and bolt.
- Bolt can be screwed with a coin if required.
- Nut fit should be checked periodically and tightened if required.

**Shoe Attachment (for medial or lateral configuration)**

- Use shoe attachment on either side of the brace (ideally towards the heel) for increased medial or lateral control (Figure 6A).
- Fasten bolt with nut securely (Figure 7A).
- Snap keyhole into place over nut (Figure 8A).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9A).

**Inlay Attachment (for central configuration)**

- Place inlay through shoe and tongue, shortest end of inlay towards toe-end (Figure 7B).
- Snap keyhole into place over nut (Figure 8B).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9B).

**Optional Foot Wrap Attachment**

- Foot wrap can be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6C).
- Snap keyhole into place over nut (Figure 8C).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9C).

**Footwrap (Figure 10A)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6D).
- Snap keyhole into place over nut (Figure 8D).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9D).

**Optional Foot Wrap Attachment**

- Foot wrap and straps can be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6E).
- Snap keyhole into place over nut (Figure 8E).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9E).

**Footwrap (Figure 10B)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6F).
- Snap keyhole into place over nut (Figure 8F).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9F).

**Footwrap (Figure 10C)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6G).
- Snap keyhole into place over nut (Figure 8G).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9G).

**Footwrap (Figure 10D)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6H).
- Snap keyhole into place over nut (Figure 8H).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9H).

**Footwrap (Figure 10E)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6I).
- Snap keyhole into place over nut (Figure 8I).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9I).

**Footwrap (Figure 10F)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6J).
- Snap keyhole into place over nut (Figure 8J).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9J).

**Footwrap (Figure 10G)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6K).
- Snap keyhole into place over nut (Figure 8K).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9K).

**Footwrap (Figure 10H)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6L).
- Snap keyhole into place over nut (Figure 8L).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9L).

**Footwrap (Figure 10I)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6M).

#### FIGURE 2

- Snap keyhole into place over nut (Figure 8C).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9C).

#### Doffing

- When doffing the brace, snap keyhole off the nut.
- Adjustment of the connection strap should not be necessary for subsequent donning.

#### WARNING

- Over time the connection strap will lose elasticity, rendering the product less effective at providing dynamic support. The user is advised to replace the strap if it becomes dependent on their level of activity and support required.
- The user is advised against donning tight shoes or socks over the Foot Wrap, as this may result in diminished blood flow to/from the foot causing injury.
- For users with lower-leg width in the lowest range, the ankle clamp may not provide an optimal level of hold when donning the device.

#### WASHING & CARE

- Over time the connection strap will lose elasticity, rendering the product less effective at providing dynamic support. The user is advised to replace the strap if it becomes dependent on their level of activity and support required.
- The user is advised against donning tight shoes or socks over the Foot Wrap, as this may result in diminished blood flow to/from the foot causing injury.
- For users with lower-leg width in the lowest range, the ankle clamp may not provide an optimal level of hold when donning the device.

#### INDICATIONS FOR USE

Drop foot

#### PRECAUTIONS

- This is intended for use by patients with spasticity.
- Never wear the brace over an open wound.
- Users with sensitive skin or those at risk of skin ulcerations and infections, such as in the case of diabetes or peripheral vascular disease, are advised to consult with their practitioner before use of this product.

#### WASHING & CARE

Drop foot

#### LIST OF MATERIALS

Nylon, polyethylene, polypropylene, cotton, polyurethane, polyester, silicone (printing).

#### INITIAL APPLICATION AND ADJUSTMENT

**Do not use**

- Measure ankle circumference with ankle cuff (Figure 2).
- Cut an ankle cuff to size (Figure 3).
- Secure the ankle cuff (Figure 4).

**Nut and Bolt (Figure 5)**

- Ensure a secure and tight fit between nut and bolt.
- Bolt can be screwed with a coin if required.
- Nut fit should be checked periodically and tightened if required.

**Shoe Attachment (for medial or lateral configuration)**

- Use shoe attachment on either side of the brace (ideally towards the heel) for increased medial or lateral control (Figure 6A).
- Fasten bolt with nut securely (Figure 7A).
- Snap keyhole into place over nut (Figure 8A).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9A).

**Inlay Attachment (for central configuration)**

- Place inlay through shoe and tongue, shortest end of inlay towards toe-end (Figure 7B).
- Snap keyhole into place over nut (Figure 8B).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9B).

**Optional Foot Wrap Attachment**

- Foot wrap can be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6C).
- Snap keyhole into place over nut (Figure 8C).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9C).

**Footwrap (Figure 10A)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6D).
- Snap keyhole into place over nut (Figure 8D).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9D).

**Optional Foot Wrap Attachment**

- Foot wrap and straps can be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6E).
- Snap keyhole into place over nut (Figure 8E).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9E).

**Footwrap (Figure 10B)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6F).
- Snap keyhole into place over nut (Figure 8F).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9F).

**Footwrap (Figure 10C)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6G).
- Snap keyhole into place over nut (Figure 8G).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9G).

**Footwrap (Figure 10D)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6H).
- Snap keyhole into place over nut (Figure 8H).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9H).

**Footwrap (Figure 10E)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6I).
- Snap keyhole into place over nut (Figure 8I).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9I).

**Footwrap (Figure 10F)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6J).
- Snap keyhole into place over nut (Figure 8J).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9J).

**Footwrap (Figure 10G)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6K).
- Snap keyhole into place over nut (Figure 8K).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9K).

**Footwrap (Figure 10H)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6L).
- Snap keyhole into place over nut (Figure 8L).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9L).

**Footwrap (Figure 10I)**

- Wrap foot and straps must be cut to size if necessary, taking care not to cut over the line of stitching (Figure 6M).

- or lateral configuration, ensuring nut is securely fastened (Figure 7C).
- Thread connection strap through ankle cuff buckle, and pull to tighten (Figure 9C).

#### Doffing

- When doffing the brace, snap keyhole off the nut.
- Adjustment of the connection strap should not be necessary for subsequent donning.

#### WARNING

- Over time the connection strap will lose elasticity, rendering the product less effective at providing dynamic support. The user is advised to replace the strap if it becomes dependent on their level of activity and support required.
- The user is advised against donning tight shoes or socks over the Foot Wrap, as this may result in diminished blood flow to/from the foot causing injury.
- For users with lower-leg width in the lowest range, the ankle clamp may not provide an optimal level of hold when donning the device.

#### WASHING & CARE

Drop foot
